### “Future History” Timeline

*Note to my readers: Although it might not be obvious, there is a nexus between many of my books (but not all of them). The world-lines of the characters weave through and around a complex future history that has a fictional timeline running from the far past to the distant future. This list probably isn't complete (you can help me fill it in by reading all my books). The essential events and the books where they appear are as follows (events that are starred are not fiction):*

226 million years ago: ETs Odri, Phumon, and Badja crash on Saturn's moon Helene (*Sing a Samba Galactica*)

65 million years ago: a later Odri plants his device in a Colorado cave (*Evil Agenda*)

1450: Deep Diver's first experience in zero g on the home world (novella “Flight from the Mother World,” found in the short story collection *Pasodobles in a Quantum Stringscape*)

1503: Deep Diver-led Rangers head for New Haven to flee the nefarious Tali, ETs who are invading the mother world (novella “Flight from the Mother World,” found in the short story collection *Pasodobles in a Quantum Stringscape*).

2005: Data Quality Act – Boston Globe 8/28/05\*

2014: Luxor Hotel in Las Vegas is bombed; assassination attempt on U.S. president during speech on Wall Street (*The Midas Bomb*). [Note from Steve: obviously this fictional universe is a parallel one. I wrote published the first edition of the book in 2009, so the events in the book are in that future, but the state of the Universe split into separate timelines.]

2015-2018: “Chen and Castilblanco Series” #2-5: Major confrontation between U.S. authorities and cartel/terrorists/militia collaboration (*Angels Need Not Apply*); major black market arms dealers thwarted (*Teeter-Totter between Lust and Murder*); terrorist who kidnaps royal family members brought to justice (*Aristocrats and Assassins*); old Nazi using stolen painting to finance human trafficking and porn films thwarted (*The Collector*).

2016: BREXIT\*. (Mentioned in *Rembrandt's Angel*.) [Note: the date is for Great Britain's vote to leave the EU. As of this writing, they're still figuring out how to do it. In my fictional timeline, the country leaves the EU.]

2017: Sweden, the last European holdout, changes its medical system because it can't afford a completely socialized system that cover all their citizens due to high prices attached to new drugs and techniques as well as the influx of immigrants from southern Europe. (Mentioned in *Full Medical*.)

2018: Esther Brookstone and Bastiann van Coevorden thwart neo-Nazis from taking over Europe (*Rembrandt's Angel*).

2019: Esther Brookstone and Bastiann van Coevorden have more adventures as they search for St. John the Divine's tomb. (*Son of Thunder*)

2032: Sheila Remington elected to her first term (*Soldiers of God*).

2036: Sheila Remington elected to her second term (*Soldiers of God*)

November, 2037: Sheila Remington, campaigning for re-entering the space race with a slide showing the ice tides on Titan\*, dies in a terrorist attack, leading to third war in the Middle East (starts 2038) (*Soldiers of God*).

2040-2050: steady increase in percentage of crimes due to the lucrative black market in body parts. (Mentioned in *Full Medical*.)

## About the Author

Steven M. Moore was born in California and has lived in various parts of the U.S. and Colombia, South America. He always wanted to be a storyteller but had to postpone that dream to work in academia and R&D as a scientist. His travels around Europe, South America, and the U.S., for work or pleasure, taught him a lot about the human condition and our wonderful human diversity, a learning process that started during his childhood in California's San Joaquin Valley. He and his wife now live in Montclair, NJ, just thirteen miles west of the Lincoln Tunnel. For more details, visit him at his website <https://stevenmmoore.com> and follow him on Facebook, Twitter, and Goodreads where he participates in many discussions with readers and writers. Steve is a member of International Thriller Writers.
